

# Vantage.

## Take precision stereotactic neurosurgery to the next level.

Leksell® Vantage™ Stereotactic System, based on the proven Leksell principles, is designed to meet the need for better imaging, workflow and patient comfort. Vantage features metal-free materials in the head frame and MR conditional accessories, potentially enabling you to see more anatomy without artifacts or distortion on MR images, and to use higher signal-to-noise ratio MR sequences for faster, more definitive imaging.
